

Chain CK Stainless

Product information

Electropolished on request:

Advantages of electropolishing Electrolytic polishing is an electro- chemical process for surface treatment which causes ferritic ions to leave the material surface. The intended purpose is to reduce the microroughness. Therefore dirt or product remains are much more unlikely to stick to the chain. The cleanability is improved. Electrolytic polishing is also used for deburring, buffing or passivating.

The process effects a metallurgical clean surface without defects. The material's corrosion resistance is fully exploited.

Grade 60 similar DIN 5687

Material: AISI 316L

Temperature range: -40°C up to 250°C

Finish: Blasted

Safety factor: 4:1

Grade: 6
