

Gal & alloy, soft eye O1

Product information

O1 grips are designed for load restraint applications, and are able to be slid into position on the midsection of a cable.

They have a soft eye for fitting in tight spaces, are made from durable 2070 grade galvanised wire, and are swaged with an aluminium alloy ferrule.

They have a slimline design to reduce snagging, and all protruding wires are covered with heat shrink to protect the operators hands.
